

PHONAK ROGER—HEAR THE DIFFERENCE

Soundfield Systems help achieve the best possible learning experience for students, enabling them to hear the teacher's voice clearly in class. Benefits for both teachers and students include;

- Improved sentence recognition ability
- Increased attention, interaction and participation
- Quicker acquisition of reading, writing & numeracy skills
- Reduced teacher vocal strain
- Improved classroom management

Why choose Phonak Roger?

With several different brands and suppliers in the market, it is hard to determine the reality from the marketing.

The significant difference between the Phonak Roger Soundfield System and its competitors can be found in the unique features of the Roger Touchscreen microphone. The Roger Touchscreen has three directional microphones that not only receive the talker's voice, but also works to monitor and reduce the background noise. The Phonak Roger Soundfield speaker is dynamic and will adjust the volume of the speaker to a comfortable level and ensures that the speech signal is louder than the noise in the classroom.

Hear the Proof

Three of the most common Soundfield Systems that are found in Australian schools were set up in an actual classroom under a controlled and identical manner. A Roger Neckloop was used as the Roger Receiver to simulate what students hear in their hearing aid, cochlear processor or Roger Focus.

Soundfield 1: Phonak Roger Soundfield.

Soundfield A: Redcat Lightspeed Soundfield with added Roger Touchscreen to enable connectivity to a Roger Receiver.

Soundfield B: Juno Soundfield with added Roger Touchscreen to enable connectivity to a Roger Receiver.
